STATISTICS

How we deal with those issues?

Infra Provisioning

Proctor

build passing go report A+ GoLangCI A+

Description

Proctor is a developer friendly automation orchestrator. It helps everyone use automation and contribute to it

<https://github.com/gojek/proctor>

How about
DEBUGGING & SSH ACCESS?

COMMON PROBLEM

Related to logs

Scattered, unstandardized logging platform used

Or it's **not use** any logging platform

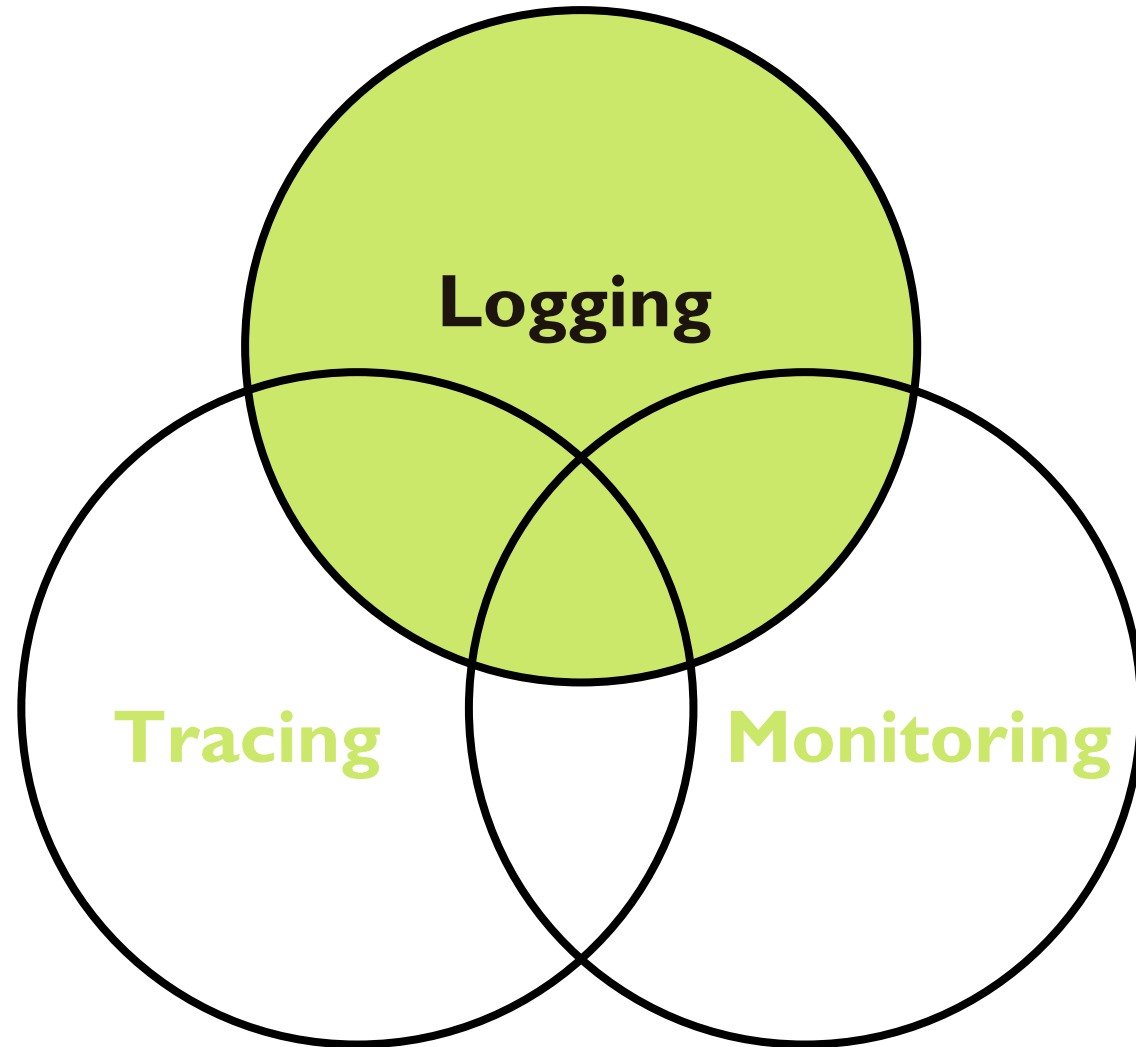

Need to **directly access** the machine

There are no logs (**already rotated**)

What if the services are on container?

Observability is **paramount** to achieve
minimum MTTR

CONSIDERATIONS

when building BARITO

Setup & maintaining logging infra is a hassle

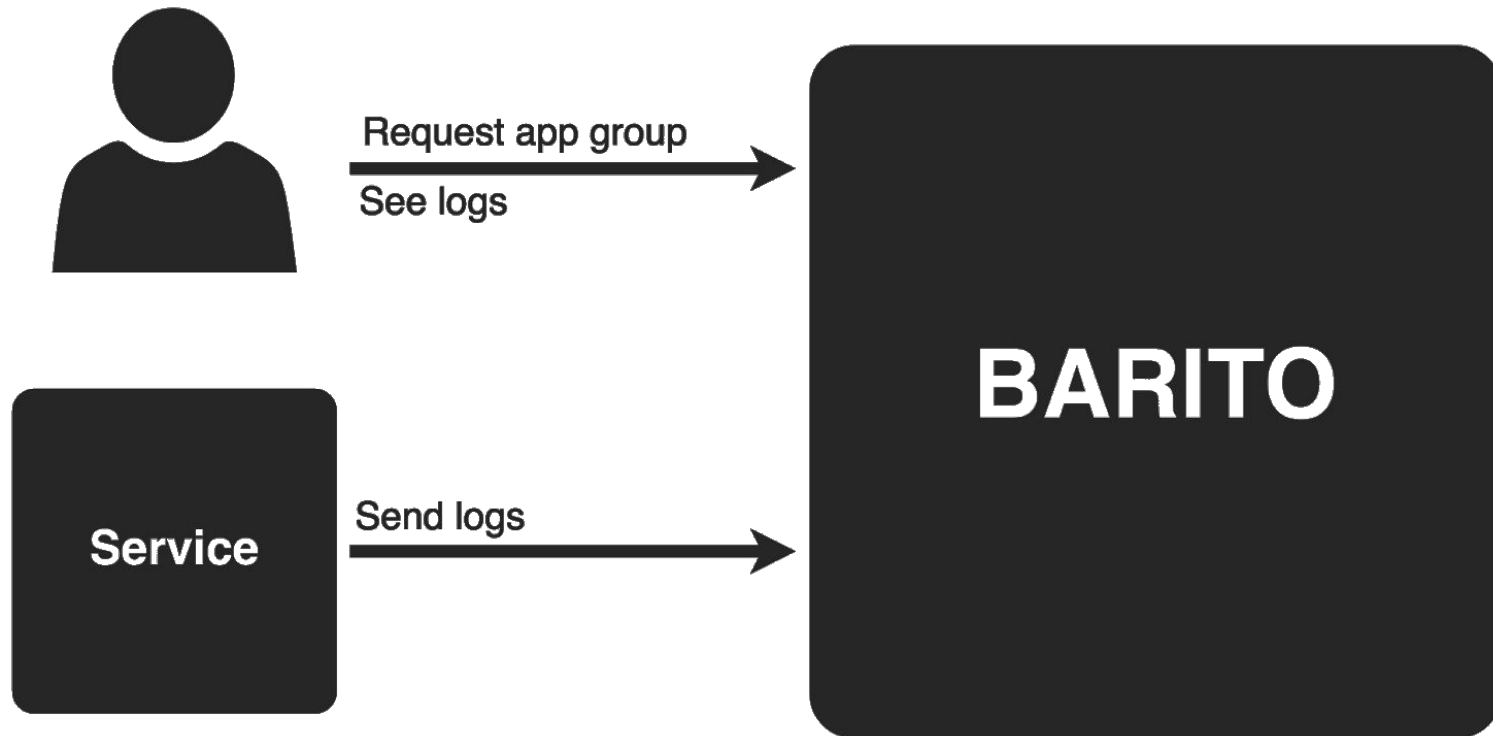

Managed solutions are costly and locked-in...

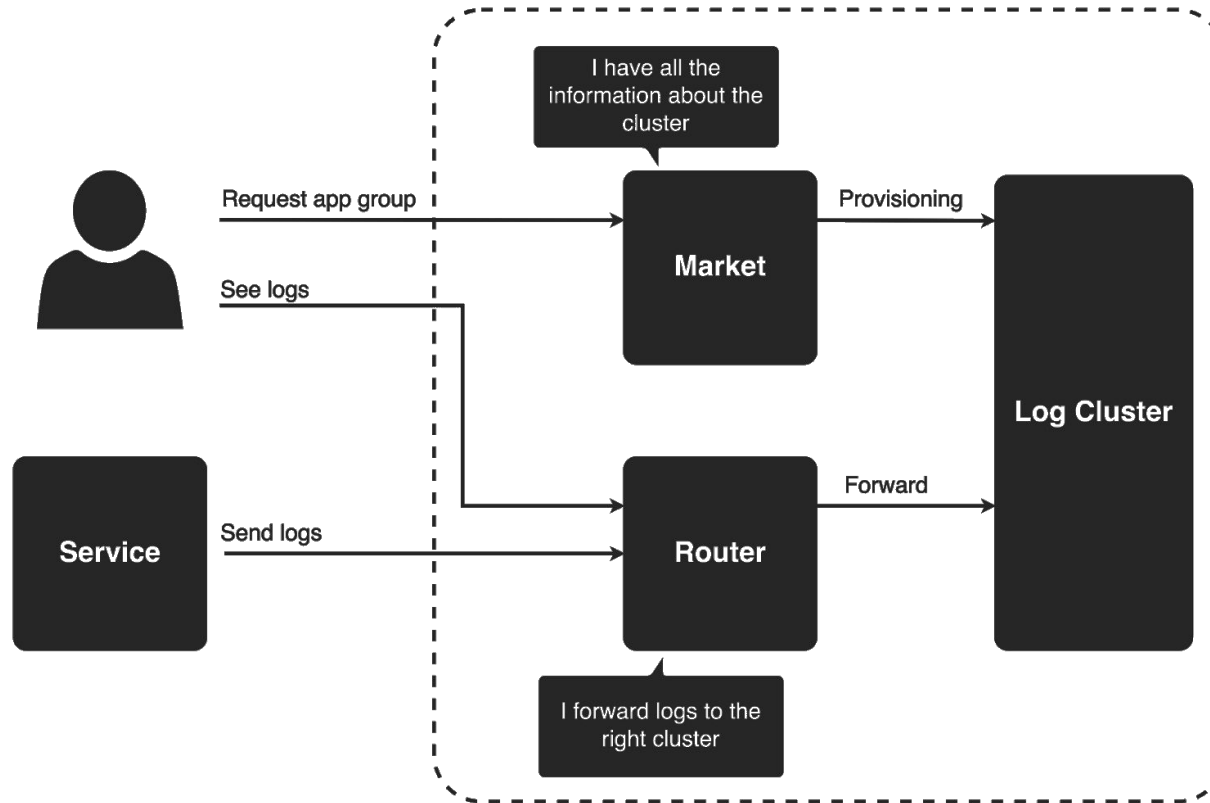

We have hybrid
infrastructures, spanning
across managed cloud
services and our own
datacenters

Some of our services are highly regulated by law, we must manage the data ourselves

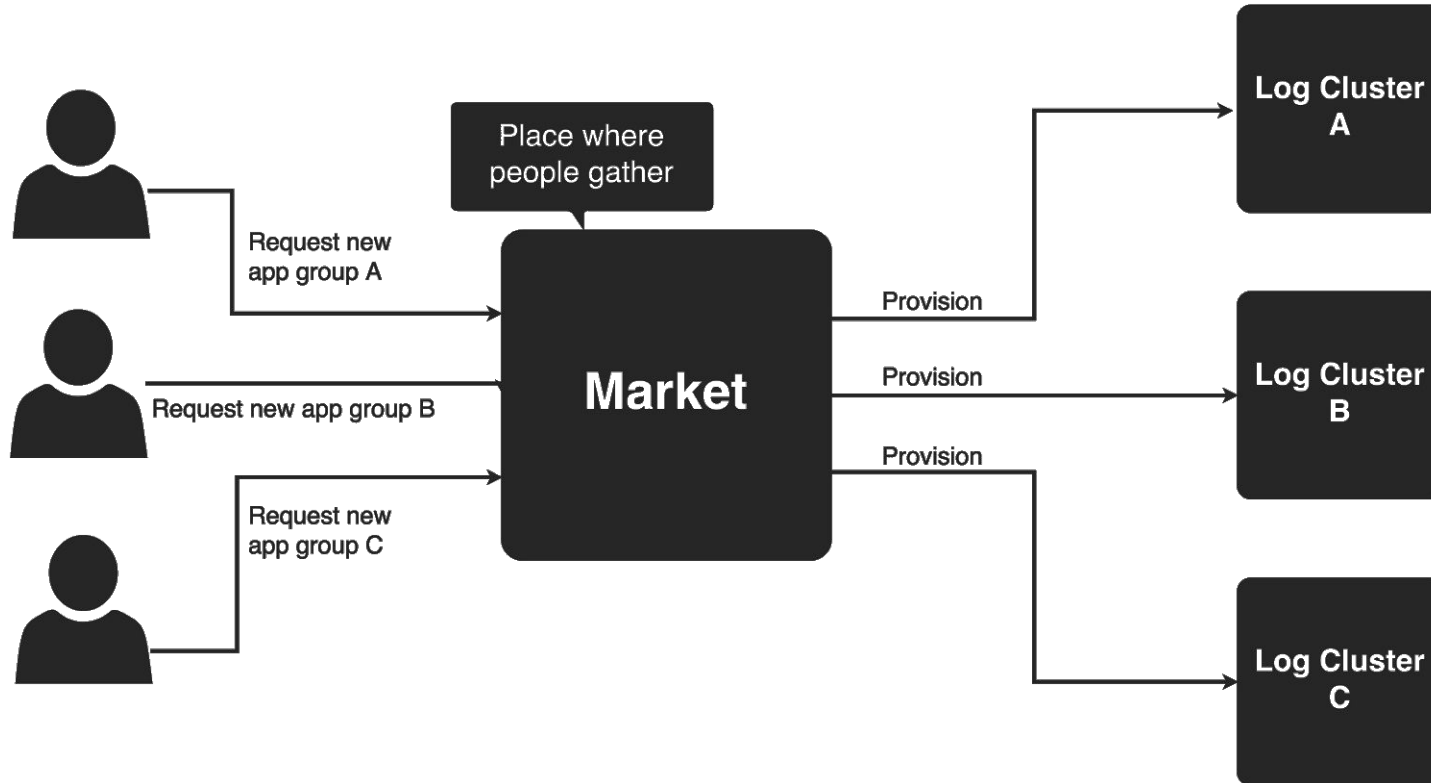

ARCHITECTURE

SEE THE LOGS

SETUP BARITO

Add Barito Helm Chart Repo

```
helm repo add barito https://baritolog.github.io/helm-charts
```

Create Helm Chart Value

```
apps:  
  - name: vote  
    applicationGroupSecret: 66ff8axxxxxxxxxxxxxxxxxxxxxxxxxxxxxx  
    baritoAppName: k8s-mfn-vote-01  
    produceUrl: https://example-router.com/produce_batch  
  - name: worker  
    applicationGroupSecret: 66ff8axxxxxxxxxxxxxxxxxxxxxxxxxxxxxx  
    baritoAppName: k8s-mfn-worker-01  
    produceUrl: https://example-router.com/produce_batch
```

Install Barito Agent

```
helm install barito/td-agent-barito \  
--name=td-agent-barito --values=myApps.yaml \  
--set rbac.create=true
```

Add Annotation

```
spec:  
  template:  
    metadata:  
      annotations:  
        barito.active: "true" # We also still accept fluentd.active: "true"
```

VM

barito-agent-cookbook

Chef cookbook to setup Barito Agent on our nodes.

Using `fluent-plugin-systemd`

Below is the examples of input configuration.

```
default[cookbook_name]['sources'] = [
  {
    type: 'systemd',
    name: 'barito-journalctl',
    path: '/run/log/journal',
    raw_options: ['matches'],
    matches: [{'_SYSTEMD_UNIT': 'syslog.service'}],
    read_from_head: true,
    storage: {
      '@type': 'local',
      persistent: true,
      path: '/etc/td-agent/barito-journalctl.pos'
    },
    entry: {
      fields_strip_underscores: true,
      fields_lowercase: true
    }
  }
]
```

```
<source>  
  @type tail  
  tag barito-test  
  name barito-test  
  path /var/log/barito-test.log  
  pos_file /etc/td-agent/barito-test.pos  
  <parse>  
    @type none  
  </parse>  
</source>
```

```
<match barito-test>  
  @type barito_batch_vm  
  name barito-test  
  application_group_secret abcxyz  
  application_name svc-a-worker  
  produce_url https://example-router.com/produce_batch  
  <buffer>  
    ...  
  </buffer>  
</match>
```

BARITO NOW

BARITO LOKI

Cluster Template Details

Name: Log - Loki

Instances:

```
[
  {
    "type": "yggdrasil",
    "count": 0
  },
  {
    "type": "consul",
    "count": 1
  },
  {
    "type": "loki",
    "count": 1
  },
  {
    "type": "barito-flow-loki",
    "count": 1
  },
  {
    "type": "grafana",
    "count": 1
  }
]
```

BENCHMARK

	ONLY CONSUMED	INDEX to ES	INDEX and STORE to ES	STORE to LOKI
MAX_TPS	64K/s	2K/s - 2,5K/s	1.4K/s - 1.7K/s	48K/s

- Depend on your ES setup, memory and disk
- Loki haven't tested on our production
